Note: The reported projections are merely suggestive and should not be interpreted as population estimates. These graphs represent projected differences in the size of the impoverished population count, not the projected proportion of the population in poverty. See the full report by Curtis and O’Connell (2010) for more details (http://www.apl.wisc.edu/index.html).

†Growth for this county was tempered by reducing growth rates for all racial categories to approximate projections reported by the Wisconsin Department of Administration.
