Note: The reported projections are merely suggestive and should not be interpreted as population estimates. These graphs represent projected differences in the size of the impoverished population count, not the projected proportion of the population in poverty. See the full report by Curtis and O’Connell (2010) for more details (http://www.apl.wisc.edu/index.html).

†The growth suggested by the methods reported in the briefing (see the note above) led to an unreasonable projection. To improve our projection, we reduced female growth for African Americans to match male growth.
